FlipFET™ Power MOSFET

V_{SS}	R_{SS(on)} max	I_S
20V	40mΩ@V_{GS1,2} = 4.5V	±6.5
	60mΩ@V_{GS1,2} = 2.5V	±5.2

- Ultra Low R_{SS(on)} per Footprint Area
- Low Thermal Resistance
- Bi-Directional N-Channel Switch
- Super Low Profile (<.8mm)
- Available Tested on Tape & Reel
- ESD Protection Diode ®

Description

True chip-scale packaging is available from International Rectifier. Through the use of advanced processing techniques and a unique packaging concept, extremely low on-resistance and the highest power densities in the industry have been made available for battery and load management applications. These benefits, combined with the ruggedized device design that International Rectifier is well known for, provide the designer with an extremely efficient and reliable device.

The FlipFET™ package, is one-fifth the footprint of a comparable TSSOP-8 package and has a profile of less than .8mm. Combined with the low thermal resistance of the die level device, this makes the FlipFET™ the best device for applications where printed circuit board space is at a premium and in extremely thin application environments such as battery packs, mobile phones and PCMCIA cards.

Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature.
- ② Pulse width $\leq 400\mu\text{s}$; duty cycle $\leq 2\%$. Gate voltage applied to both gates.
- ③ When mounted on 1 inch square 2oz copper on FR-4.
- ④ Figures 1, 2 and 3: One Fet is biased with $V_{GS} = 9.0\text{V}$ and curves show response of the second FET. See Fig.4.
- ⑤ Figures 5, 6 and 7: G1 and G2 are shorted. See Fig.9a&b.
- ⑥ The diode connected between the gate and source serves only as protection against ESD. No gate over voltage rating is implied.
